SUMMARY

Computer Science & Statistics graduate from BINUS (August 2026), fresh off a one-year Data Analyst internship at Indonesia Eximbank. Strongest in statistics and data tooling: Tableau, Excel, R, Python, SQL. Shipped five web apps (e-commerce, in-browser statistical analysis, sports analytics, a pixel-art idle game, real-time 3D) through AI-assisted development, handling product design, API integration, and deployment end to end.

EDUCATION

Bina Nusantara University

Bachelor of Computer Science & Statistics

West Jakarta, DKI Jakarta

Graduated: August 2026

- **Relevant Coursework:** Algorithm & Programming (C), Data Structures, Machine Learning, Deep Learning (TensorFlow, Keras), Artificial Intelligence, Data Analysis, Text & Data Mining, Computational Biology (BioPython), Software Engineering, Object-Oriented Programming (Java), Web Programming (Laravel), UI/UX.

WORK EXPERIENCE

Indonesia Eximbank (Lembaga Pembiayaan Ekspor Indonesia)

Data Analyst Intern

South Jakarta, DKI Jakarta

March 2025 - February 2026

- Fulfilled Leads Requests from other divisions: Excel export profiles (buyers, three-year export growth, HS-code breakdowns) into PowerPoint decks for 1,000+ prospective debtor companies.
- Wrote market studies (Kajian) on requested HS codes, processing trade data into chart packs (world and Indonesia exports, top exporters, destination growth) and researching the drivers behind each movement.
- Built interactive Tableau dashboards that auto-generated the charts for those economic reports, removing manual reporting work.
- Scraped Indonesia's export-import data from the BPS portal into Excel pivot tables (tens of millions of rows), so chart data no longer had to be downloaded by hand.
- Cleaned and validated the bank's nationwide company database, the data used to screen prospective debtors, so the numbers were reliable before management acted on them.
- Designed a Figma prototype for the division's internal data platform.

Nusatalent

UI/UX Designer Intern

West Jakarta, DKI Jakarta

August 2023

- Designed and prototyped the platform's "Events" section for intuitive event discovery.
- Produced end-to-end design deliverables (user flows, wireframes, and high-fidelity mockups) in Figma.
- Executed a one-month design sprint, translating business requirements into a development-ready product.

PROJECTS

xEleven: Premier League Analytics

epl-xeleven.vercel.app

Next.js, Recharts

- Built a season-management dashboard with nine interactive tools (standings, scouting, title-race charts, Manager Mode) over ten seasons of Premier League data.

ceritabel: AI-Assisted Statistical Analysis

ceritabel.vercel.app

Next.js, TypeScript, Vitest

- Built a privacy-first web app that runs a full statistical workflow (EDA, hypothesis tests, OLS regression with classical-assumption checks, panel models, and time-series analysis) entirely in the browser.
- Hand-implemented the inference engine (exact p-values, confidence intervals, effect sizes), backed by ~80 unit tests with its p-values verified against R.
- Integrated a grounded LLM layer (Gemini/Groq) that explains results in plain language and exports reproducible Python (pandas/statsmodels) and R code.

Bakery Kita: Full-Stack E-Commerce

Next.js, Supabase, Midtrans

bakery-kita.vercel.app

- Developed an end-to-end ordering platform: catalog, cart, checkout, and QRIS payments via Midtrans (sandbox).
- Designed a PostgreSQL schema with Row-Level Security, email/Google authentication, customer order history, and a role-gated admin dashboard.
- Implemented server-side price validation and SHA-512 webhook signature verification for payment integrity.

Juragan Gorengan: Browser Idle Game

Next.js, TypeScript, GSAP

jurangangorengan.vercel.app

- Built a pixel-art idle game simulating an Indonesian street-food business: five stalls with distinct economies, supply-and-demand simulation, and a prestige loop across five cities.
- Drew every sprite in code (text maps rendered to SVG paths) and synthesized all sound effects with WebAudio; the game ships zero external art or audio assets.
- Wrote the game engine in pure TypeScript with no React dependency, so the whole simulation can port to Android unchanged.

After hours: Real-Time 3D Web Scene

Three.js, react-three-fiber, GLSL

afterhours-3d.vercel.app

- Built an interactive real-time 3D scene (a coder on a floating island) with react-three-fiber and hand-written GLSL shaders, featuring a day/night toggle and thousands of grass blades rendered with GPU instancing.

TECHNICAL SKILLS

Languages: TypeScript / JavaScript, Python, R, SQL

Web & Frameworks: Next.js, React, Tailwind CSS, Node.js

Data & Statistics: Supabase / PostgreSQL, Tableau, Excel; regression, hypothesis testing, panel data, EDA

Tools & Cloud: Git/GitHub, Figma, AWS (Certified Cloud Practitioner)

AI: LLM API integration (Gemini, Groq), AI-assisted development workflow

LEADERSHIP & ACTIVITIES

Statistics Student Association (HIMSTAT), BINUS University

West Jakarta, DKI Jakarta

Human Resource & Development Staff

March 2022 - March 2024

- Organized and emceed (MC) flagship HIMSTAT events: Statistical Project for Smart Students, anniversary celebrations, the Shopee company visit, and member gatherings.
- Served as Chief Committee for HIMSTAT Gathering 2022 & 2023, leading planning and execution end to end.

First Year Program, BINUS University

West Jakarta, DKI Jakarta

Freshmen Partner

August 2022 - July 2023

- Mentored and accompanied first-year students through a 5-day Orientation & Transition Program and their first year of college, introducing them to university life and organizations.

CERTIFICATIONS & ADDITIONAL

Certifications: AWS Certified Cloud Practitioner (2024, valid through 2027); Progate Python Fundamental; Progate JavaScript Fundamental.

Languages: Bahasa Indonesia (native), Javanese (fluent), English (professional working proficiency).

Soft Skills: Public Speaking, Communication, Teamwork, Adaptability, Analytical Thinking, Creativity, Leadership.
